

AST251 Project 3 – Evaluating Claims of Extraterrestrial Messaging
jankingb
Planet 3

Tuesday 30th November, 2083

We have identified what may be an indication of extraterrestrial intelligence, as well as the planet where it may have originated. This document summarizes the information gathered so far about the candidate message and its candidate planet of origin.

Potential evidence for extraterrestrial intelligence

Astronomers have detected a narrowband microwave transmission that appears to have originated from this planet’s solar system. The transmission is believed to contain an image and is displayed below with the most likely aspect ratio. The transmission lasted a short duration and then stopped. The transmission is shown below:

```
111000000000000000000000000000000000000000000000000000000000000000000000110
1110000111000000000000000000000000000000000000000000000000000000000000000000110
11100011111000100010001010000100000100000100000000000010000000000

1100001111100010001000001000010000000000010000000000010000000111
1100000111000000000000000000000000000000000000000100000000000000111
```

This signal was first noticed at UTC 2077-09-21/13:07.

Parameters of the candidate planet of origin and its host star

| | |
|----------------------------------|------|
| Spectral Type | F |
| Stellar Luminosity (Solar Units) | 1.38 |
| Stellar Mass (Solar Masses) | 1.08 |
| Distance to Star (lightyears) | 5.5 |
| Planet Mass (Earth masses) | 0.6 |
| Atmospheric Pressure (atm) | 1.4 |

Figure 1: We have isolated the radial velocity of the host star due to the candidate planet. Data begins at UTC 2077-09-23/15:56. Positive values indicate the velocity at which the star is moving towards us; negative indicate the velocity at which it is moving away.

Atmospheric composition of the candidate planet (percent by volume)

| Molecule | Concentration |
|----------|---------------|
| N_2 | 32.1 |
| CO_2 | 27.8 |
| O_2 | 12.7 |
| H_2O | 27.1 |
| CH_3Cl | 0.274 |

Gas Abundance (percent by volume)

Figure 2: Concentration of various gases in the atmosphere of the candidate planet versus time. Note that the y-axis will usually only show the variation multiplied by some factor, shown in the upper left, and then added to some normal amount, also in the upper-left.

Figure 3: Concentration of various additional gases in the atmosphere of the candidate planet versus time. Note that the y-axis will usually only show the variation multiplied by some factor, shown in the upper left, and then added to some normal amount, also in the upper-left.

Figure 4: Maps of the surface of the candidate planet taken at two different times. Times are indicated above each image relative to the times shown in the radial velocity curve. Those maps are shown here. Tan areas indicate what we believe to be land, while blue-ish areas indicate what we believe to be liquid regions of some kind. Other colors present reflect the visible color as best as we are able to measure.
