AST251 Project 3 – Evaluating Claims of Extraterrestrial Messaging lizhen49 Planet 2

Wednesday 23rd June, 2077

We have identified what may be an indication of extraterrestrial intelligence, as well as the planet where it may have originated. This document summarizes the information gathered so far about the candidate message and its candidate planet of origin.

Potential evidence for extraterrestrial intelligence

Astronomers have detected a narrowband radio transmission that appears to have originated from this planet's solar system. The transmission is believed to contain an image and is displayed below with the most likely aspect ratio. The transmission has been observed to repeat itself regularly. The transmission is shown below:

010111111111111111111111111111111111111
0101111100011111111111111111111111111
0101111000001111111111111111111111111
01011100000001110101111111101111111111
0101110000000101010101011110111110101111
0101110000000111110111111111111111111
0101111000001111111111111111111111111
010111110001111111111111111111111111111

This signal was first noticed at UTC 2037-06-24/00:09.

Parameters of the candidate planet of origin and its host star

Spectral Type	F
Stellar Luminosity (Solar Units)	1.49
Stellar Mass (Solar Masses)	1.1
Distance to Star (lightyears)	652.7
Planet Mass (Earth masses)	3.1
Atmospheric Pressure (atm)	8.0

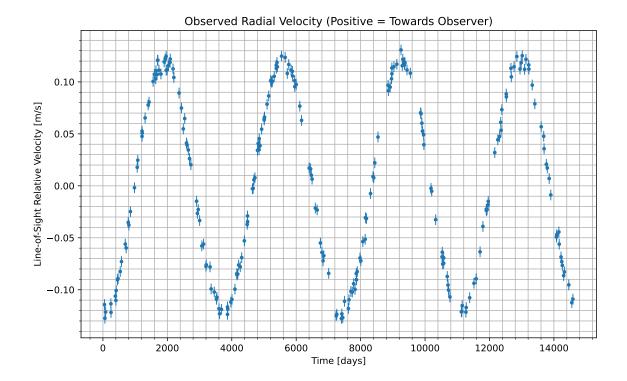

Figure 1: We have isolated the radial velocity of the host star due to the candidate planet. Data begins at UTC 2037-06-24/08:44. Positive values indicate the velocity at which the star is moving towards us; negative indicate the velocity at which it is moving away.

Atmospheric composition of the candidate planet (percent by volume)

Molecule	Concentration
N_2	13.8
CO_2	42.1
H_2	21.4
O_2	12.3
H_2O	10.4

Gas Abundance (percent by volume)

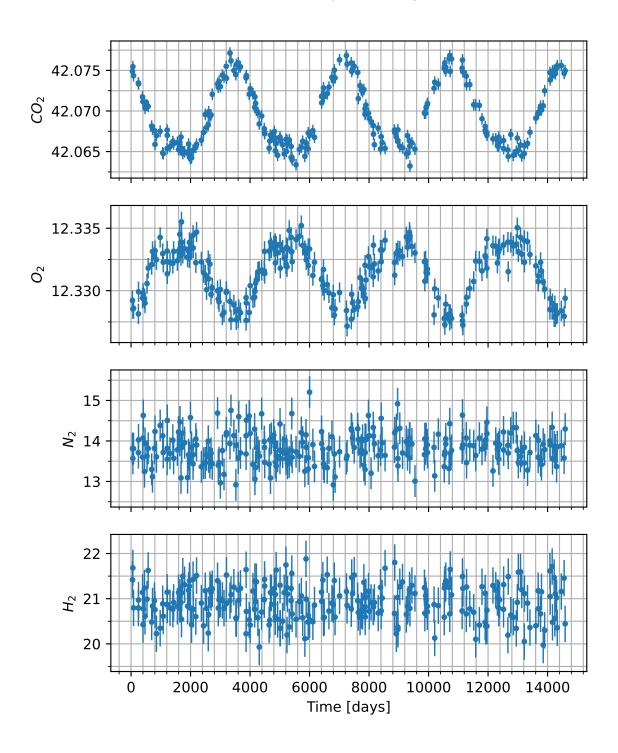

Figure 2: Concentration of various gases in the atmosphere of the candidate planet versus time. Note that the y-axis will usually only show the variation multiplied by some factor, shown in the upper left, and then added to some normal amount, also in the upper-left.

Gas Abundance (percent by volume)

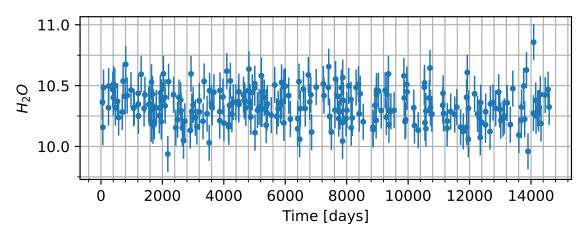

Figure 3: Concentration of various additional gases in the atmosphere of the candidate planet versus time. Note that the y-axis will usually only show the variation multiplied by some factor, shown in the upper left, and then added to some normal amount, also in the upper-left.

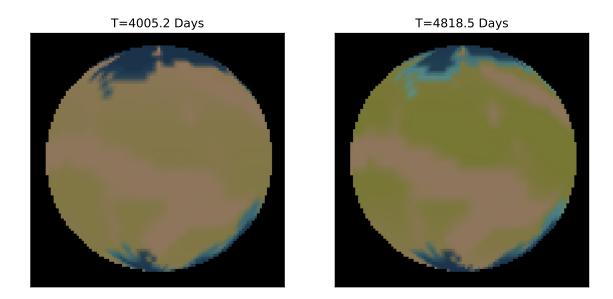

Figure 4: Maps of the surface of the candidate planet taken at two different times. Times are indicated above each image relative to the times shown in the radial velocity curve. Those maps are shown here. Tan areas indicate what we believe to be land, while blue-ish areas indicate what we believe to be liquid regions of some kind. Other colors present reflect the visible color as best as we are able to measure.
