

AST251 Project 3 – Evaluating Claims of Extraterrestrial Messaging mannkenn Planet 3

Thursday 15th March, 2074

We have identified what may be an indication of extraterrestrial intelligence, as well as the planet where it may have originated. This document summarizes the information gathered so far about the candidate message and its candidate planet of origin.

Potential evidence for extraterrestrial intelligence

Astronomers have detected a narrowband radio transmission that appears to have originated from this planet's solar system. The transmission is believed to contain an image and is displayed below with the most likely aspect ratio. The transmission lasted a short duration and then stopped. The transmission is shown below:

```
010010000110100001001010111100000100111101101001
011011000110110101110000010110110101110100101110
111110000110100110110000001000001001100111110001
010011011011010000000001001001010010100000110011
000010110110000111111110001110010001110110000011
101101101110101111100110111011110000001001101011
111100010110001110100011110001000010110000101001
```

This signal was first noticed at UTC 2069-09-21/02:54.

Parameters of the candidate planet of origin and its host star

Spectral Type	F
Stellar Luminosity (Solar Units)	1.79
Stellar Mass (Solar Masses)	1.16
Distance to Star (lightyears)	9.6
Planet Mass (Earth masses)	2.4
Atmospheric Pressure (atm)	29.6

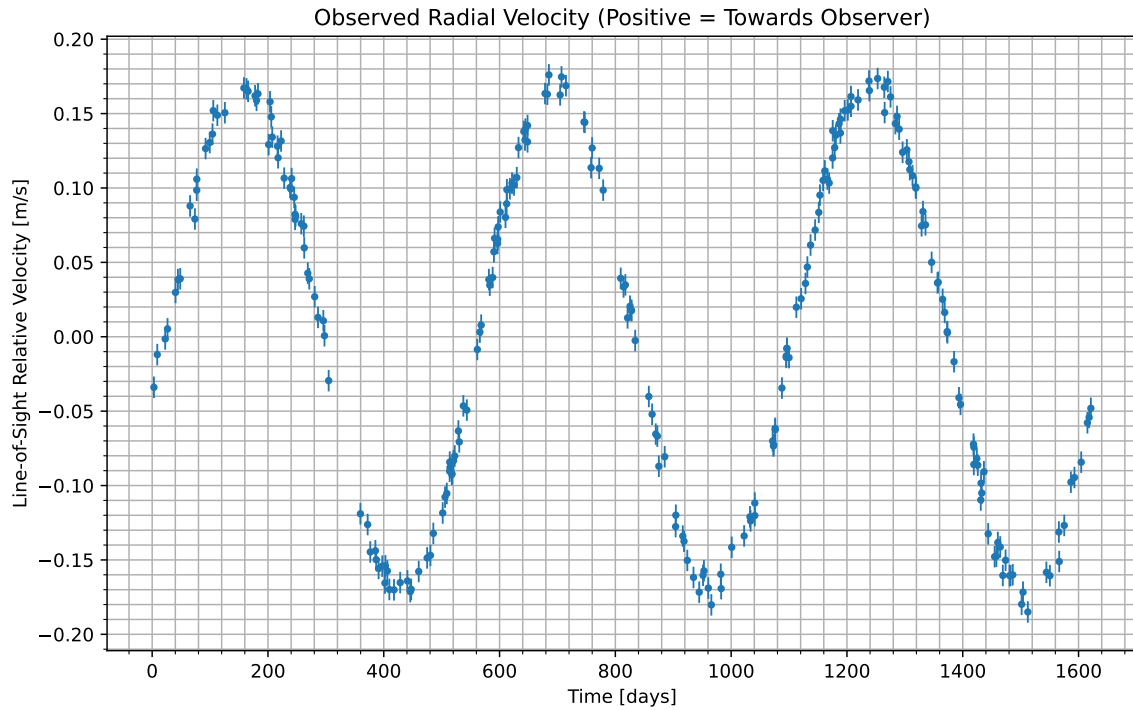

Figure 1: We have isolated the radial velocity of the host star due to the candidate planet. Data begins at UTC 2069-09-21/07:35. Positive values indicate the velocity at which the star is moving towards us; negative indicate the velocity at which it is moving away.

Atmospheric composition of the candidate planet (percent by volume)

Molecule	Concentration
N_2	20.7
CO_2	45.5
H_2O	33.9

Gas Abundance (percent by volume)

Figure 2: Concentration of various gases in the atmosphere of the candidate planet versus time. Note that the y-axis will usually only show the variation multiplied by some factor, shown in the upper left, and then added to some normal amount, also in the upper-left.

T=1040.9 Days

T=1175.4 Days

Figure 3: Maps of the surface of the candidate planet taken at two different times. Times are indicated above each image relative to the times shown in the radial velocity curve. Those maps are shown here. Tan areas indicate what we believe to be land, while blue-ish areas indicate what we believe to be liquid regions of some kind. Other colors present reflect the visible color as best as we are able to measure.
